

EXAMPLE
OF A SOLUTION!

How to avoid drainage blockages and unpleasant smell in a fish processing plant?

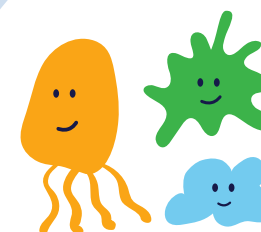

Sieves

Large enough sieves and grease traps remove solid matter from the waste water.

Wood fibre as packing material

Replacing friable expanded polystyrene by wood fibre in containers.

Grease eating bacteria

Sewer system is ozonized and grease eating bacteria added in order to avoid odor.

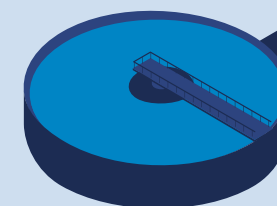

Quality control

Quick reactions to the changes in waste water quality.

Training

Cooperation with the waste water treatment plant and staff training.

Sewage from a fish processing plant does not cause trouble in sewage system or in the waste water treatment plant.
Baltic Sea thanks!
