

EXAMPLE  
OF A SOLUTION!

## How to stop hazardous substances originating from metal coating processes entering sewage in a jewelry factory?

### Uptaking dust from metal grinding

Using vacuum cleaner  
instead of washing.

### Water recycling

Generated  
waste water is  
minimized in  
production lines.

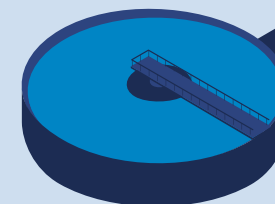

### Waste water pre-treatment

Vacuum distillation  
cleans waste water  
before discharging  
it in the sewer.

### Recycling of metalliferous sludge

Sludge generated in  
pre-treatment is transported  
to professional recycling.

Pre-treated waste water does  
not cause trouble in the waste  
water treatment plant.  
Baltic Sea thanks!
